CHECK AS MSP REGISTRATION  
NO REFUNDS AFTER FEBRUARY 17, 2012**

## **“PERIODONTAL AND IMPLANT SURGERY IN THE ESTHETIC ZONE”**

**Dr. Kirk Pasquinelli**  
San Francisco, CA

Dental therapy in the esthetic zone is rarely simple. Esthetic problems often are multi-faceted and cannot be satisfactorily resolved by restorative treatment alone. An excellent outcome often requires a well-planned, sequential inter- and intra-disciplinary treatment plan involving multiple practitioners and multiple procedures. As periodontist we are uniquely positioned to aid our referral doctors in their quest for the best esthetic outcomes. This presentation will present the periodontal surgical procedures available for maximizing the esthetic and biologic outcomes for teeth and implants in the esthetic zone. Dr. Pasquinelli will illustrate several cases from start to finish, highlighting the coordination and performance of several surgical modalities within one operation or in sequential operations over time.

Key topics to be presented are

- Periodontal anatomy and surgery as they relate to restorative dentistry and dental implants.
- Esthetic improvements possible with periodontal plastic surgery around teeth as well as pontic areas.
- The utilization of implants in the esthetic zone.
